

**CURRICULUM VITAE ABREVIADO (CVA)**

**IMPORTANT – The Curriculum Vitae cannot exceed 4 pages. Instructions to fill this document are available in the website.**

**Part A. PERSONAL INFORMATION**

First name	Joaquín		
Family name	Pérez Pariente		
Gender (*)	Male	Birth date	18/08/1957
Social Security, Passport, ID number	00671537Y		
e-mail	jperez@icp.csic.es	URL Web	
Open Researcher and Contributor ID (ORCID) (*)		0000-0001-5322-9528	

(\*) Mandatory

**A.1. Current position**

Position	Research Professor		
Initial date	30/06/2001		
Institution	Consejo Superior de Investigaciones Científicas (CSIC)		
Department/Center	Instituto de Catálisis y Petroleoquímica (ICP)		
Country	Spain	Tel. number	915854784
Key words	Catalysis, zeolites, porous materials, synthesis		

**A.2. Previous positions (research activity interruptions, indicate total months)**

Period	Position/Institution/Country/Interruption cause
1986-1992	Tenured Scientist at ICP (Spain)
1992-2001	Researcher at ICP (Spain)
1996-2006	Part-time Associated Lecturer, Univ. Complutense (Spain)

**A.3. Education**

PhD, Licensed, Graduate	University/Country	Year
Degree in Chemical Sciences	Universidad Autónoma de Madrid/Spain	1979
PhD in Chemistry	Universidad Complutense de Madrid/Spain	1984

**Part B. CV SUMMARY**

I did my PhD in the Institute of Catalysis and Petroleum Chemistry of CSIC under the supervision of Prof. Avelino Corma, dealing on the development of monofunctional catalysts based on the fibrous natural magnesium silicate sepiolite. The same year that I got my PhD (1984), I started a two-years postdoc stay in the laboratory of Surface Chemistry and Catalysis of the Katholieke Universiteit Leuven headed by Prof. P. Jacobs. The propose of this postdoc research was to learn on synthesis and characterization of zeolites, with the purpose of starting a new research line on zeolite synthesis within Prof. Corma's research group once I was back in Spain. Zeolites and zeolite materials in general have since then been my main research topic, and I have been Responsible Researcher of the Molecular Sieves Group of ICP since this group was established in 1993. My work has mainly been focused on the design of specific synthesis procedures that lead to catalysts that possess particular configurations of highly active and selective active centers for different catalytic reactions. Some of the main achievements have been the incorporation for the first time of titanium in zeolite Beta and in the ordered mesoporous material denoted MCM-41, which has enlarged the application field of these materials as catalysts for the selective oxidation of organic substrate in mild conditions. The material Ti-MCM-41 was patented and licensed for the commercial production of ethylene oxide. A most recent advancement has been the design of a novel synthesis strategy to control the distribution of the acid active sites associated to aluminum in zeolites, which has contributed

to open a new research field. More recently, I have been involved in a new synthesis strategy that made use of supramolecular aggregates to obtain large-pore chiral zeolites, which has resulted in a patent filed in 2020 with PCT extension, and another one in 2022. I have established all along my research career fruitful collaboration with several research groups in Spain and abroad on topics that while not directly related to catalysis have been based on my knowledge of zeolite chemistry. In addition, they have expanded the multi and interdisciplinary character of my research. In 1996 I was appointed part-time Associate Lecturer at the Department of Bioinorganic Chemistry of the Faculty of Pharmacy of UCM, Madrid, headed by Prof. María Vallet-Regí to contribute to the development of a new research line on the development of mesoporous materials for the controlled release of drugs. We published in 2001 the first paper worldwide ever published on this topic. I have been collaborating with the Department of Physical Chemistry of País Vasco University for the development of materials with advanced optical properties based on the inclusion of dyes into the zeolites pores. I have also paid attention to aspects concerning sustainability and improving of life conditions in developing countries. This led me to research on sustainability of biofuels, whose conclusions are collected in the book published in 2016 cited in C.1. I have also been involved since 2011 in cooperation projects with the university of Addis Ababa funded by CSIC and AECID, to develop a material for the removal of fluoride from drinking water to be implemented in Ethiopian rural communities. A patent was issued and licensed in 2014 to a Spanish company which is now commercializing this technology, which is currently in use in two defluoridation plants in that country, inaugurated in November 2019 thanks to the funding of private Switzerland and Spanish foundations. All these research activities have been funded by 34 Research Projects (14 as Project Leader (PL)), 25 contracts with industries (10 as PL), 18 Projects of International Cooperation (6 as PL), with a total of 267 SCI papers, 19 Non-SCI (most in Scopus) papers and 31 patents, three of them licensed, 13 book chapters; co-author of 3 books, author of two books published in 2016 and editor of 3 books.

I have also been interested in the formation of young researchers, as evidenced in the supervision of 14 PhD and 13 Degree Thesis and a number of undergraduate *practicum*. I regularly participate in outreach activities and programs, mainly addressed to high school students, with lectures on sustainability, nanotechnology and catalysis. Since 2002, I share these activities with research and teaching on the history of chemistry (output: 25 articles and book chapters, 3 books, editor of one book, three research projects founded by National Agencies, Summer course at UIMP, CSIC/UAM yearly course since 2004), with focus on the replication of historical chemical procedures and their use for modern catalysis, which has led to the preparation of novel gold catalysts. I have been in 2017/2018 member of the Commission of the Chemistry Area of CSIC, and I have participated in evaluation panels of national research proposals and awards.
