Part B. CV SUMMARY (max. 5000 characters, including spaces)

The study of molecular determinants in mitochondrial physiology represents the core of my research. Early in my career, as a major paper (out of 4 publications) from my PhD (Summa Cum Laude, extraordinary PhD award, U. Salamanca), we described a role for γ-glutamylcysteine as antioxidant in neuroprotective gene therapy (Nat.Comm, 2012), worthy of several awards. At the Univ. of Padua (IT), I later contributed as a postdoc to seminal works on how mitochondrial dynamics and cristae stabilize respiratory supercomplexes (Cell, 2013), which preserve tissue homeostasis (CellMetabolism, 2015). I also contributed to unravel an autophagic sorting to axons by Opa1 (Nat.Comm., 2020). As first author, we described cristae structure to engage ATPase activity and preserve mitochondrial membrane potential (Quintana-Cabrera et al., NatComm., 2018) and redox homeostasis (RedoxBiol, 2021). In the latter, I am co-corresponding author, as in other 2 publications. I communicate to media and the broad public our results, as well as continuously participate in dissemination activities (Pint of Science, European Researcher's Night, etc.). I supervised students that have top scored in their evaluations, some even awarded by prestigious agencies (Archimedes Award by MEFP, SEBBM award). Almost all past graduate (5), Erasmus+ (3) and master (5) students continued their PhD in mitochondria/neuroscience, some supervised by me (2 current). This have been paralleled by teaching duties in Degree and Master lessons for 13 and 6 years, respectively. I

have built an active network of collaborators of international prestige. My research has been competitively funded and participated to renoun international projects. I review for prestigious journals (EMBO Journal, PNAS, CDDif, up to 13) and evaluation agencies (CINECA, Italy; ZSUN OSF, Poland; ANEP, Spain; Marie Curie Fellowships, European Commission). I have participated in more than 40 conferences. Recently appointed **Ramón y Cajal** (Started June 2022) **fellow with I3 accreditation** on research excellence (2023), I aim to shed light on how intercellular mitochondrial transfer drives (patho)physiology in the nervous system.
